

Planning for Heating Checklist

1	<p>What is the volume of space to be heated</p>	
2	<p>When is the heating needed</p> <p>Important because is outside air temperature, which varies with the season.</p>	
3	<p>Where is the heating needed</p> <p>Location is important because pockets of a landscape can be several degrees cooler than what is on record from the nearest weather observatory.</p> <p>In order to receive onsite service within 12 hours of a problem call, exact location is needed</p>	
4	<p>Who owns the site</p> <p>We will arrange with the site owner to get the safety approvals and safety indoctrination.</p>	
5	<p>What is the type of power at the site</p>	
6	<p>What is the type of fuel, and how will it be delivered</p>	
7	<p>Will additional heating equipment be used, and if so, what is the equipment?</p> <p>To guarantee the heating system, we recommend that we maintain all the heating equipment used in the project.</p>	
8	<p>What is the background and expertise of your crew?</p> <p>If you have full time mechanics onsite, you will need less help from us.</p> <p>If you move your heaters and you have an electrician, you will need us less often.</p>
